Maintenance and Troubleshooting

- **DO NOT** rinse the keyboard directly with water or spray liquids onto its surface. Liquids can cause internal short circuits or oxidize metal contacts.
- **AVOID** using corrosive cleaners. Ammonia, strong acids, or strong alkaline detergents will corrode the keycap coating or plastic shell, causing discoloration or embrittlement.
- **AVOID** prolonged exposure to dusty or humid environments

Troubleshooting

issue	troubleshooting steps
Keyboard lights do not turn on	1. The data cable is not plugged in properly; please replug it. 2. The data cable is defective; please replace it.
Inaccurate or unresponsive keystrokes	1. Check if the actuation point is set too low. 2. Check if the correct switch type is selected. 3. Recalibrate the keyboard.
Keyboard cannot be calibrated	1. Check if the firmware is updated to the latest version. 2. Check whether the installed physical switches match the selected switch type in the settings.
